Required:

- **Odin - Inspector and Serializer (Must).**
- **DOTween (HOTween v2) (Must).**
 - DOTween Pro (Optional). It supports TMP.
 - If you do not have DOTween Pro, you should remove the "HHK/UIEC/Animation Pro" folder to avoid errors.
 - TextMesh_Pro (TMP) (Optional).

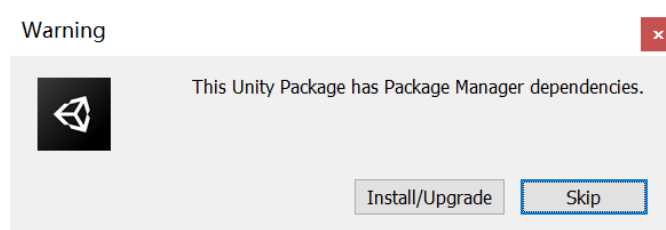

Dependents:

- 2D Sprite

Installation:

Please following this order to install all the plugins

- Manually install 2D Sprite, Odin, Dotween.
- Install UI Enhanced Component
 - When you see this Warning, select **[Skip]**.

Tips :

- Please use Full HD Resolution (1920x1080) for the demo scene.

Unity 2020.x (tested)

- Unity 2020 did NOT support “**IPointerMoveHandler**” in the UIECEvent.cs and UIECAnimator.cs.

Unity 2019.x (tested)

- Some APIs would not be supported by 2019, so please manually do some modifications on those APIs. Remove the parameters from those APIs if the error shows in Console. I will update these flaws in the next version.

Features

- Friendly inspector UI.
- 60+ pre-defined cells, more are coming...
- Easy to create your own cells by C#.
- No coding is required.
- Supports custom cell.
- Preset can easily share with all UIs.
- Easy to incorporate into the current project - no need to break any logic.
- Source files included.

Supported Events

UIEC supports the custom events and all Unity events will also be supported.

- [IPointerEnterHandler](#) - OnPointerEnter - Called when a pointer enters the object
- [IPointerExitHandler](#) - OnPointerExit - Called when a pointer exits the object
- [IPointerDownHandler](#) - OnPointerDown - Called when a pointer is pressed on the object
- [IPointerUpHandler](#)OnPointerUp - Called when a pointer is released (called on the GameObject that the pointer is clicking)
- [IPointerClickHandler](#) - OnPointerClick - Called when a pointer is pressed and released on the same object
- [IInitializePotentialDragHandler](#) - OnInitializePotentialDrag - Called when a drag target is found, can be used to initialize values
- [IBeginDragHandler](#) - OnBeginDrag - Called on the drag object when dragging is about to begin
- [IDragHandler](#) - OnDrag - Called on the drag object when a drag is happening
- [IEndDragHandler](#) - OnEndDrag - Called on the drag object when a drag finishes
- [IDropHandler](#) - OnDrop - Called on the object where a drag finishes
- [IScrollHandler](#) - OnScroll - Called when a mouse wheel scrolls

- IUpdateSelectedHandler - OnUpdateSelected - Called on the selected object each tick
- ISelectHandler - OnSelect - Called when the object becomes the selected object
- IDeselectHandler - OnDeselect - Called on the selected object becomes deselected
- IMoveHandler - OnMove - Called when a move event occurs (left, right, up, down)
- ISubmitHandler - OnSubmit - Called when the submit button is pressed
- ICancelHandler - OnCancel - Called when the cancel button is pressed

Animations:

Thanks to Dotween, UIEC can easily support most basic animations, such as Game Object movement and UI animations. You can easily create your own animations by C# (in UIEC, we call it Cell).

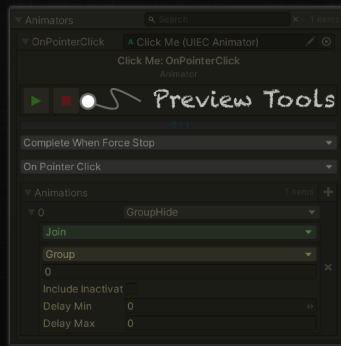

UIEC provides you with a set of high-level components to manage the animation. It defines the life cycles of the animations. It allows you to define how to run the animation cells, e.g., in a sequence, parallel, or mix. And it allows you to define how to stop the animations, e.g. if it forces you to complete the animations and events immediately or not.
